- ◇ Weekly rate (2 days/week) = \$115
- ◇ \$ 50 deposit—will credit towards payment
- ◇ Register on transparent classroom and drop off payment to LGMA check or cash

FARM to TABLE

weeks of June 5 , 12, 19, 26

During this four-week summer camp, we will learn about the food system, the people and resources involved in getting food from farm to plate. We will become more connected to the garden by harvesting fresh ingredients to make delicious recipes. The children will also create a compost pile! By composting, the children will learn about three environmental R's (reduce, recycle, reuse), what items are biodegradable, the importance of worms and insects, and much more. There will be lots of opportunities to study, sort, scrub, and taste a variety of healthy ingredients.

MASTER BUILDERS

weeks of July 10, 17, 24, 31

During this four-week summer camp, we will discuss that almost everything human-made was created by an engineer. We will learn about what an engineer does. We will have different materials throughout the classroom, including Legos, blocks, sticks, recycled materials, dirt, construction trucks, nuts, bolts, and hammering for the children to create and assemble different structures and challenges. With our hands-on activities, the children will develop their problem-solving skills, collaborate with others, and persevere through trial and errors.
